LECTURE

ZRS Architekten Ingenieure was founded in 2003 as an integrated design and engineering partnership in Berlin.

They have developed their key competency in the use of natural building materials, primarily timber, earth and bamboo. With ambitious clients and partners, their projects aim to promote the innovative usage of local and renewable materials both at home and abroad.

Their comprehensive experience of planning and supervising the construction of earth building projects is regularly requested by both other architecture and design offices, as well as construction firms around the world.
